## MFR Desoldering Hand-piece Upgrade

OK International is pleased to introduce a new desoldering hand-piece for their MFR range of soldering stations. The innovative design allows the hand-piece to be used in two configurations, a pencil style or with a pistol grip, allowing flexibility for a variety of applications. In addition, solder collection capabilities have been increased by 40% compared to the MFR-HDS hand-piece, and the quick-change disposable collection chamber reduces downtime.

The MFR-H5-DS hand-piece is compatible with all previous MFR desoldering systems, however the new design requires a new workstand cradle to be installed when used with older style workstands (MFR-WSDS). The MFR-H5-DS-C upgrade kit includes the desoldering hand-piece with the universal cradle assembly added at no additional charge. The new cradle assembly is easy to install (just 2 screws) and assembly instructions are provided in the kit.

The new hand-piece utilises the existing MFR-HDCA coil assembly and DXP desoldering cartridges to allow existing customers to convert with minimal consumable requirements.

Part No	Description
MFR-H5-DS-C	Upgrade kit, MFR-H5-DS hand-piece and MFR-WSDSCB cradle assembly <i>Can also be ordered separately:</i>
MFR-H5-DS	Desoldering hand-piece
MFR-WSDSCB	Universal cradle assembly

### Consumables

MFR-DC10	Disposable collection chamber (Pack of 10)
MFR-DC100	Disposable collection chamber (Pack of 100)
MFR-HDCA	Coil Assembly for MFR-H5-DS
